

Problem - Solution Fit

Date: 18 June 2026

Team ID: Banka Akshay Kumar Reddy

Project Name: ShopEZ (E-Commerce Platform)

The Market Gap Identified

Through market research and user empathy mapping, we identified three critical gaps in current mid-tier e-commerce offerings: 1.

Sluggish User Interfaces: Traditional multi-page applications cause friction, leading directly to higher cart abandonment rates. 2. **Lack of**

Aesthetic Personalization: Modern users expect visually polished experiences, including options for dark mode, which many platforms

overlook. 3. **Disjointed Administrative Workflows:** Small business owners are often forced to juggle multiple software suites to manage a single storefront.

Our Tailored Solution (ShopEZ)

ShopEZ is meticulously engineered to fit these exact problems by providing a unified, high-performance platform:

- For the Shopper (Speed & Aesthetics):** By utilizing a React-based Single Page Application (SPA), ShopEZ ensures instantaneous page transitions. State management via Context API means the shopping cart updates in real-time without reloading. Furthermore, the customized UI with a native Light/Dark mode toggle directly addresses modern aesthetic expectations, reducing bounce rates and building brand trust.
- For the Admin (Unified Efficiency):** The integrated, secure admin dashboard allows for immediate, stress-free inventory and order management directly from the main web application. Protected by robust JWT authentication and role-based access control, admins can seamlessly transition from viewing the storefront to managing the backend, drastically reducing their operational overhead.
