

Proposed Solution

Date: 18 June 2026
Team ID: Banka Akshay Kumar Reddy
Project Name: ShopEZ (E-Commerce Platform)

Parameter	Detailed Description
Problem Statement	Users frequently experience slow, fragmented, and visually outdated shopping journeys. Simultaneously, store administrators struggle with complex, disconnected inventory management tools that hinder productivity.
Idea / Solution Description	ShopEZ: A high-performance, fully responsive MERN-stack Single Page Application (SPA). It features an integrated dual-role system (Customer/Admin) within a single codebase, enriched with intuitive Light/Dark themes and real-time cart functionality.
Novelty / Uniqueness	ShopEZ distinguishes itself by avoiding heavy, bloated component libraries. It utilizes the native React Context API for highly efficient global state management. The focus is on a bespoke aesthetic and seamless UX, providing a premium feel often reserved for enterprise platforms.
Social Impact / Customer Satisfaction	By streamlining the online shopping process, ShopEZ creates a delightful and accessible user experience that caters to modern preferences (like dark mode). It also empowers small business owners by providing them with powerful, accessible, and stress-free management tools, lowering the barrier to digital retail.
Business Model (Revenue Model)	Initially structured for direct-to-consumer online retail (B2C), allowing businesses to sell products directly. The architecture is flexible enough to scale into a multi-vendor marketplace or a SaaS e-commerce provider model in the future.
Scalability of the Solution	Employs MongoDB's flexible, schema-less document structure combined with Node/Express. By utilizing stateless JSON Web Token (JWT) authentication, the backend can seamlessly scale horizontally across multiple servers as user traffic grows, without session bottlenecks.
